

# jFlickrFeed Plugin

This plugin makes it easy to pull Flickr feeds and display them on your site. Below are some examples that can get you thinking about its possibilities.

## Basic Use

The photos below are being pulled from Flickr using the jFlickrFeed plugin. Here is the code that is being used:

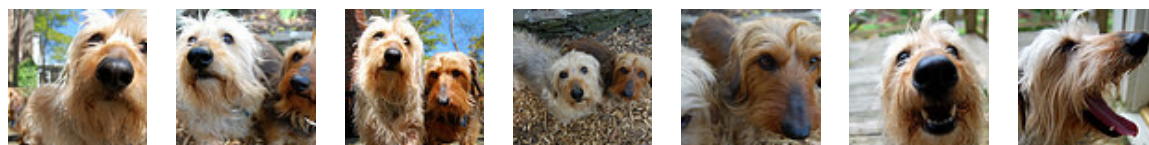

```
$('#basicuse').jflickrfeed({
  limit: 14,
  qstrings: {
    id: '44802888@N04'
  },
  itemTemplate:
    '<li>' +
      '<a href="{{image_b}}"></a>' +
    '</li>'
});
```

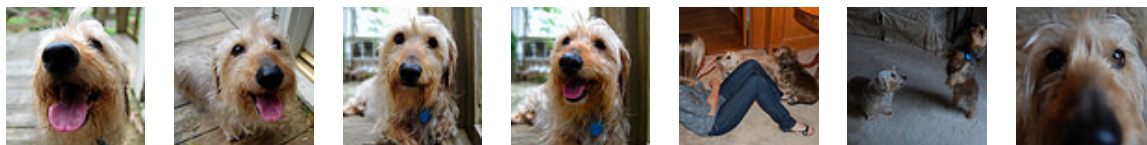

## Use with ColorBox

We can use the callback to apply the colorbox plugin after the photos are loaded.

```
$('#cbox').jflickrfeed({
  limit: 14,
  qstrings: {
    id: '37304598@N02'
  },
  itemTemplate:
    '<li>' +
      '<a rel="colorbox" href="{{image}}" title="{{title}}">' +
        '' +
      '</a>' +
    '</li>'
}, function(data) {
  $('#cbox a').colorbox();
});
```

## Use with Cycle

Here is an example of how we can tweak the templates and make it work great with jQuery Cycle.

```
$('#cycle').jflickrfeed({
  limit: 14,
  qstrings: {
    id: '37304598@N02'
  },
  itemTemplate: '<li><div>{{title}}</div></li>'
}, function(data) {
  $('#cycle div').hide();
  $('#cycle').cycle({
    timeout: 5000
  });
  $('#cycle li').hover(function() {
    $(this).children('div').show();
  }, function() {
    $(this).children('div').hide();
  });
});
```

## Use Without Templates

It is also possible to use the plugin without the templating. Instead it would be useful to use the individual item callback:

```
$('#nocallback').jflickrfeed({
  limit: 4,
  qstrings: {
    id: '37304598@N02'
  },
  useTemplate: false,
  itemCallback: function(item) {
```

3/30/2011

jFlickrFeed Plugin

```
$(this).append("<li><img src='" + item.image_m + "' alt=''/></li>");  
}  
});
```
